GSM-X-ETH

ETHERNET MODULE FOR GSM–X COMMUNICATOR

GSM–X–ETH is a device designed to expand the communication options of the **GSM–X** universal module by adding Ethernet capability. This channel may be used in parallel with GPRS transmission or as an alternative to it. Configuration of priorities for the use of individual paths for specific functions is available. This option enables the **GSM–X** module settings to be optimally suited to the needs of a specific system.

- interaction with **GSM–X** universal communication module
- support for Ethernet as additional communication channel
