# INT-O

## OUTPUT EXPANSION MODULE

The output expansion module, designed for use in conjunction with the control panels of **INTEGRA**, **INTEGRA Plus** and **VERSA** families. This device replaces the CA–64 O–OC, CA–64 O–R and CA–64 O–ROC modules. The **INT–O** allows for expansion of the system by additional 8 wired outputs. An additional tamper input helps detect unauthorized opening of the enclosure in which the module is installed.

- system expansion with 8 outputs:
  - 8 low current outputs, OC type
  - up to 8 relay outputs
  - each OC type output is connected in parallel to relay output
  - capability to reduce power consumption by disabling support for selected relay outputs
- ability to connect to **RS–485** bus (firmware update via the bus)
