# MZ-2 S

MZ–2 S is an universal distribution box module designed for low–voltage electrical installations, including security alarm systems. Its purpose is to connect several wires without having to solder them or use any additional terminal blocks or other connections, which greatly facilitates the installation work. For easy identification, the connections are numbered.

MZ–2 S is provided with 18 screw–type terminal blocks having maximum operating voltage 24 V AC/DC and current up to 500 mA. Metal pins are attached to each terminal to enable selected connections to be connected in series using jumpers. Additionally, the module is provided with a tamper switch that responds to opening the enclosure.

The MZ–2 module with screw–type terminals comes in two versions, which differ by the size of their terminal blocks: **MZ–2 L** (large blocks) and **MZ–2 S** (small blocks).

The module is available in an aesthetic enclosure made of white plastic.

- facilitates installation of low–voltage installations, like alarm installations
- screw type terminals

Number of terminals	18
Max. terminal voltage	24
Max. jumper current	0,500
Tamper contact	Tak
Enclosure dimensions	89 x 66 x 30
Terminals dimensions	1,5 x 2,5
Weight	86

The actual appearance of the products may differ from the presented images. Product descriptions are provided in the web service for information purposes only.
